

Virtual Visits: Reduce health care costs for you and your employees

The MDIVE™ Virtual Visits benefit from Blue Cross and Blue Shield of Texas, gives your employees access to consultations with board-certified health care providers and licensed therapists through the phone, an online video or convenient mobile app 24/7.

VirtualVisits is an efficient, cost-effective treatment alternative for adults and children that can address a variety of non-emergency health issues including colds, flu, rashes and allergies, and behavioral health concerns such as depression. The average visit time for a medical consultation is 30 minutes.*

Consultations can be held at times that fit your employees' needs and from their homes, at work or on the go. This reduces their need to miss work, use paid time off or visit the ER, lowering health care costs for both them and you.

Services are available in both English and Spanish with translation services available for other languages.

*The average wait time for BlueCross BlueShield consultations is 30 days.
